Subject: Testimonial Letter

At first I didn't believe that a child can sense things with their eyes closed. But when my son Husain underwent The Brain Enrichment Program, I was overwhelmed to see my son perform with his eyes closed recognizing colour cards, uno cards and words. The price of this program is so reasonable that I got much more in return as he has developed in all of the following ways. First his money counting speed has increased much more than before. He has also become very confident in his approach towards life as previously he would think negatively. He has developed lot of positivity towards his studies and believes that he can score beautifully in the board exams which he could never even imagine before. Now he can understand his studies better which he was unable to do earlier as previously he would only mug up without understanding. He has started scoring more marks in the exams especially in Science. He has also become more energetic as previously he would be very exhausted at the end of the day but now he remains fresh till the last hour of the day. His learning speed of has doubled as he takes half the time of what he use to take earlier. He can write his marathi answers better than before and he makes all his projects on his own which he would never do it before. I would urge all parents to go ahead with this program as this will be the greatest gift that you can ever give your child in their lifetime.
