### **Subject: Testimonial Letter**

It's simply amazing amazing amazing. Words can't describe the transformation that my daughter has undergone after The Brain Enrichment Program. Not only can she can identify things with her closed eyes but she can also learn things much faster than before. Most importantly her memory has become very sharp as she can learn her long her answers now which she could not do before. After this training, she can focus more on things, her self-esteem has also increased a lot and she also participates in skits and other activities which she was not doing previously. Along with that she can read more fluently and can read faster than before. She has also become more positive and feels more interested in doing things like going to the madrasa which she didn't like before. In addition to that now her concentration level has risen and she can also understand her maths much better than before. Now she can speak more fluently in English and can also speak in front of a crowd without any preparation which marks an overall rise in her confidence level. Another unique quality developed in her are her people skills which has made it easy for her to make new friends and talk to strangers. Previously she just had some friends and would never try talking to a stranger. Her absorption level in learning has become much faster as she can absorb a 30 minute task in only 10 minutes. And lastly her handwriting has improved tremendously. I feel she has become more intelligent and her intuition has also enhanced. I thank the Express Learning team for this kind of a unique transformation.
