Subject: Testimonial Letter

At first I didn't believe that a child can see with eyes closed. But when my son Husain underwent The Brain Enrichment Program, I was overwhelmed to see the change in his performance. His confidence has increased tremendously. Now he can speak confidently without hesitation which he could not do before. His stage fright has gone away. He has also become more observant. His imagination and writing skills in other languages as well as English has improved. Previously he would get distracted very fast and now he can concentrate on a topic for nearly an hour without any disturbance. He can also understand his concepts extremely fast with an increased learning speed. Another major change that has taken place is that he can control his anger much better than before as previously his anger use to kill him from inside. His Maths has improved a great deal as his understanding in geometry has changed for the better. This program has also helped him develop interest in the subjects which he hated to do but now his interest has expanded amazingly. I feel that I have paid a real less amount in comparison to the benefits that my son has received, so I urge all parents to go ahead with this advanced technology for your child's brain to give them a brighter future.
