Subject: Testimonial Letter

Before my son Ebrahim joined The Brain Enrichment Program, he was very shy and timid and his confidence level was also not that great, but after joining this program there was a great change in his behavior, his confidence level has really improved. Along with that his memory has become extremely sharp. Previously he would never take part in any extra-curricular activities like drama etc. but now he manages it well without any rehearsal at home. Recently he also spoke in front of a huge crowd which previously he could not and this transformation has come about only due to this program. His grasping power has increased, he is able to cope up with difficult subjects such as mathematics all by himself, although the class strength in his school is somewhat close to 50 students, he is able to concentrate properly and perform well. He has become very sharp, his observation skills have improved, his communication skills have become better, he has become much more independent with his school work, such as the assignments and projects. His academic results have tremendously improved, and he is able to study much better, in a less amount of given time, at this very young age. This program has really transformed my son in the above ways and I truly feel that I have got a lot more than what I had expected. The price of this program is worth much more compared to the results that I got.
